

LAB ASSIGNMENT

Paper Code: CPMCA403

Course: MCA

Paper Name: Lab on Python Programming

Semester: IV

Sl	Questions	Page	Remarks
1	Write a Python program to create a list variable with contain six items to slice the middle two items and display.		
2	Write a Python program to display the first and last Colors from the following list. Color=["RED","GREEN","BLUE","YELLOW"]		
3	Write a Python program to make an Arithmetical Calculator using built-in functions.		
4	Write a Python program that checks whether a specified value is contained within a group of values.		
5	Write a Python menu driven program to convert the given temperature from Fahrenheit to Celsius and vice versa depending upon user's choice.		
6	Write a Python program to input an integer value to convert it in Decimal, Binary, Octal and Hexadecimal with using format function.		
7	Write a Python program input three numbers through the user to find out greatest of three numbers using nested if statements.		
8	Write a Python program to check if an item is already present in a Dictionary.		
9	Write a Python program to create the multiplication table (from 1 to 10) of a number.		
10	Write a Python program to find out factorial of a given number.		
11	Write a Python program input a number which is any digits to check the number is Palindrome or not Palindrome.		
12	Write a Python program input a number to check the number is Prime or not Prime.		
13	Write a Python program input a number which is any digits to check the number is Armstrong or not Armstrong.		
14	Write a Python program to check whether a string is Palindrome or Not Palindrome.		
15	Write a Python program input N numbers to calculate sum and average, If found a negative number then stop the iteration and display the sum and average.		
16	Write a Python program to generate Fibonacci series up to 10 terms		
17	Print the following pattern:		
	1 5 4 3 2 1 1		
	1 2 4 3 2 1 2 2		
18	1 2 3 3 2 1 3 3 3		
	1 2 3 4 2 1 4 4 4 4		
19	1 2 3 4 5 1 5 5 5 5 5		
20	Write a Python program to find out Reverse of a String, Tuple, List, Range and Set.		
21	Write a Python program to find out greatest of an Integer number, Floating point numbers, Characters, Strings and Lists using built-in function.		

Dr. Shyama Prasad Mukherjee University, Ranchi

(Through the Upgradation of Ranchi College, Ranchi)

Department of: MCA & M.Sc.IT

22	Write a program in Python to print current date and time using built-in function.		
23	Write a program in Python to find the day of the week of a given date.		
24	Write a Python program that prints the calendar for a given month and year.		
25	Write a Python program that prints the calendar for a given year.		
26	Write a Python program to Calculate number of days between two dates		
27	Write a Python program to swapping of two numbers with using function with arguments and no return value.		
28	Write a Python program to calculate number of days between two given dates.		
29	Write a Python program to find out Area of Circle and Area of Triangle using function with arguments and return value.		
30	Write a Python program to calculate simple interest using Required argument function.		
31	Write a Python Program to perform different set operations like in mathematics (Union, Intersection, Difference and Symmetric difference)		
32	Write a Python program with using default argument function give a suitable example.		
33	Write a Python program with using variable length argument function give a suitable example.		
34	Write a Python program with using class and object to input two numbers by getdata() member function to calculate sum and display in display() function.		
35	Write a Python program to illustrate the use class and object to passing by value to the function and calculate sum and display.		
36	Write a python program using single inheritance give a suitable example.		
37	Write a python program using multiple inheritance give a suitable example.		
38	Write a Python program to illustrate the use of __init__ method give a suitable example.		
39	Write a Python program with using try-except block give a suitable example.		
40	Write a Python program with using try-except-else block give a suitable example.		
41	Write a Python program with using try-except-else-finally block give a suitable example.		
42	Write a Python program to transpose a square matrix.		
43	Write a Python program to multiplication of two matrices.		
44	Write a Python program with using file handling to create a file, write some text in the file.		
45	Write a Python program with using file handling to open an existing file and check "File not found" if file not available in disk.		
46	Write a Python Program to copy source file content to destination File.		
47	Write a Python program during run time to make a directory, renaming directory, removing directory, etc.		

Submitted To: DR. A.K. Mohapatra, Assistant Professor, Dept. of MCA & M.Sc. (IT)
